Who makes portable power units?

Japanese and Korean companies are the most involved in portable power units for electronic devices, and have recently launched a series of products that are mainly based on direct methanol-fuelled PEFC; large-scale commercialization of these devices is planned in the coming years.

Can a supercapacitor be used as a rechargeable power source?

For moderate energy demands in portable electronics, supercapacitors are suitable as rechargeable stand-alone power sources. In conjunction with rechargeable batteries in uninterruptible power supplies, supercapacitors can handle short interruptions and can extend battery life.

How many watts can a portable FC power?

To power this range of products, portable FCs are being developed in a wide range of outputs, ranging from less than 5 W up to 500 kW. This range has necessitated further sub-classification; 'FC Today', for example, classifies units with power up to 5 W as 'micro FC', and units up to a few hundred watts as 'mini FC'.

What are the advantages of PEFC-based power systems?

For military applications, another advantage of PEFC-based power systems is that they could be easily masked against thermal sensors, while other generation systems operate at higher temperatures and emit much waste heat. Here, cost is not a problem; fuel storage and supply logistics are the main limiting factors.

Discover everything you need to know about portable power stations, from battery types and inverters to solar integration and safety. Whether you're powering a home during a ...

The portable power supply scene is changing pretty quickly these days, mainly because more folks are looking for renewable energy options. If you look at recent industry ...
