How do I ensure the best industrial network design for my plant?

With cyber security and network performance at the forefront, follow a plan to help ensure the best industrial network design for your plant. To deploy EtherNet/IP plantwide at your facility, you need an industrial network design methodology. Following a plan helps you create structure and hierarchy to help maintain real-time network performance.

What are industrial PCs & control cabinets?

These can be done using industrial PCs or Control Cabinets. Control cabinets are vertical enclosures with servo drives and other electromechanical components that control or monitor machinery and factory systems associated with it. The control cabinet is a stainless steel box, which can either be wall-mounted or a standalone module on the floor.

What is a universal process cabinet?

Universal IO are installed in the UPCs allowing the cabinets to be standardized, since any field signal can be connected to any I/O channel. Universal Process Cabinet, UPC provides a standard layout with components pre-configured reducing engineering, testing, commissioning works drastically in comparison to customized cabinets.

What is a control cabinet?

A control cabinet consists of a main controller, which is a PLC or processor with I/O modules stacked beside and device modules that are usually starters and contactors for motors and controller gateways for sensors. The cabinet can also communicate wirelessly to the operations and management center using a modem or switch.

EN 61439-compliant cabinet design and ATEX-ready hardware - engineered by CTS for stable and safe industrial operations.
