Will Djibouti be the first country to produce 100% green energy?

In its bid to become the first country on the continent to produce 100% green energy by 2035, Djibouti can also draw on other ambitious projects. These include the solar power project in the Grand Bara desert, for which work began in 2020.

Why did Djibouti open up electricity production to independent operators?

For the government, the aim was to open up electricity production to independent operators so as to achieve energy independence as soon as possible. It should be noted that the state-owned company 'Electricité de Djibouti' retains a monopoly on the transmission and distribution of electricity. The project was developed by Red Sea Power (RSP).

Could a photovoltaic system be a viable solution in Djibouti?

2. Djibouti's Renewable Energy Potential making photovoltaic (PV) systems a viable solution . MW to the national grid, increasing national power capacity by 50% . estimates suggesting a potential of up to 1,000 MW of capacity .

Will Djibouti be self-sufficient in energy production in 2035?

In December 2023, the Republic of Djibouti signed up to the African Green Hydrogen Alliance. The country's formidable prospects in terms of renewable energy means that Slim Feriani can look to the future with confidence. "The objective for 2035 is to be self-sufficient in energy production," he says. "We should get there before then.
