How much does 1 MW battery storage cost?

The 1 MW Battery Storage Cost ranges between \$600,000 and \$900,000, determined by factors like battery technology, installation requirements, and market conditions.

What are base year costs for utility-scale battery energy storage systems?

Base year costs for utility-scale battery energy storage systems (BESSs) are based on a bottom-up cost model using the data and methodology for utility-scale BESS in (Ramasamy et al., 2023). The bottom-up BESS model accounts for major components, including the LIB pack, the inverter, and the balance of system (BOS) needed for the installation.

Will additional storage technologies be added?

Additional storage technologies will be added as representative cost and performance metrics are verified. The interactive figure below presents results on the total installed ESS cost ranges by technology, year, power capacity (MW), and duration (hr).

What factors affect the cost of a storage system?

Battery technology: The type of battery technology used in the storage system plays a significant role in the cost. Popular battery types include lithium-ion and LiFePO₄, with varying costs and performance characteristics. **System size and capacity:** The larger the storage system, the higher the cost.
