**How to choose an off-grid solar system in Australia?**

When considering an off-grid solar system in Australia, the size of the system and the cost are two crucial factors. The right system size depends on your household's energy needs, while the cost varies based on the system size and the quality of the equipment. Let's break it down:

**How much does solar cost in Australia?**

Solar power saves over 3.4 million Australian households \$1,600-\$2,000 annually on electricity bills at \$0.20-\$0.35/kWh, but understanding the upfront costs of a 6.6kW system (\$5,000-\$10,000) is essential for planning a smart investment. Costs vary by system size, components, location, and incentives, making it critical to know what to expect.

**How much does a 10kWh Solar System cost in Australia?**

In 2025, the average cost of solar installations in Australia for a 10kWh system is around \$10,000 (or \$1,000 per 1kWh). That figure has decreased from \$1,300 in 2023, despite national rebates being reduced every year - with the current scheme projected to end in 2030.

**What is the average solar panel size in Australia?**

The average solar panel array size in Australia is 9.3 kWh, however, many households still opt for the most widely and commonly installed size of 6.6 kWh (and this is what many suppliers refer to when breaking down cost differentials). Most residential system sizes are between 3 kW and 20 kW.

Installing or building a new kitchen island is a process that can be both exciting and costly. Here's how much a kitchen island costs, on ...
