Why do you need an IP65 rating for your outdoor electrical enclosure?

Regular inspections help you avoid unexpected failures due to water or dust ingress. You get strong protection when you choose the ip65 rating for your outdoor electrical enclosure. The ip65 rating means your equipment receives complete protection against dust and oil.

What is the difference between IP65 & IP65 enclosures?

IP65 enclosures handle tough outdoor use. IP66 enclosures stand up to harsh weather and strong water jets.

IP55: Good for light outdoor use. Handles dust and light water spray. IP65: Stronger for industrial and outdoor systems. Resists dust and water jets. IP66: Best for harsh environments. Withstands strong water jets and heavy dust.

How to keep IP65 rating strong?

You must perform regular maintenance to keep the protection level strong. The ip65 rating does not protect against extreme weather, such as heavy rain or submersion in water. Dust can enter the enclosure after long use. You need to inspect and maintain the enclosure to keep the ip65 rating.

What items are included in an IP65 enclosure?

Environmental controls, including thermostats, heat strips, air conditioning, passive or fan-assisted venting and insulation. "Washdown" rated fan assemblies. Light switches. Viewing windows. Fuse blocks and power panels. Casters, support legs and risers. IP65 enclosures are general outdoor cabinets that provide basic waterproof protection.

When choosing the best outdoor network cabinets for your telecom or data infrastructure setup, prioritize rugged construction, proper IP65 or higher ingress protection, ...
