-----  
What are the components of a base station?

**Power Supply:** The power source provides the electrical energy to base station elements. It often features auxiliary power supply mechanisms that guarantee operation in case of lost or interrupted electricity, during blackouts. **Baseband Processor:** The baseband processor is responsible for the processing of the digital signals.

What is a base station power supply?

This acts as the "blood supply" of the base station, ensuring uninterrupted power. It includes: **AC distribution box:** Distributes mains power and offers surge protection. **Switch-mode power supply:** Converts and stabilizes power while managing DC output. **Battery banks:** Serve as backup power to keep systems running during outages. 3.

What is a radio cabinet?

The cabinet houses critical components like main base station equipment, transmission equipment, power supply systems, and battery banks. Meanwhile, the pole serves as a mounting point for antennas, Remote Radio Units (RRUs), and other equipment, often resembling a "candied hawthorn stick" in its configuration.

What products can be used with a DC power system?

Batteries and more for DC power systems. Products frequently used together with DC power systems are available, including battery disconnects, batteries, battery strands, battery trays, bus covers, assorted panels, circuit breakers and much more.
