What is Poland doing about energy storage?

Poland has just rolled out one of Europe's most ambitious energy storage programmes- a EUR980 million initiative that's set to transform the country's grid infrastructure. The Polish Ministry of Climate and Environment has finalised this landmark subsidy scheme, targeting over 5 GWh of new storage capacity by 2028.

Does Poland have a new energy storage subsidy programme?

The energy storage sector in Poland showed significant momentum even before the launch of this new subsidy programme. Through power market auctions for 2021-2028 and supplementary auctions for 2021-2025, contracts for energy storage with a total capacity of 9.5 GW were already wrapped up.

Why should Poland invest in storage projects?

"The development of storage projects is a guarantee of Poland's energy security. The implementation of PGE's ambitious investment plans will contribute to reducing the emission intensity of the Polish economy, and thus increase its competitiveness on the European and global markets," commented Jakub Jaworowski, minister of state assets.

Due for Q1 2026 completion [8], this project's 800MWh per site configuration directly addresses Poland's need for long-duration storage solutions beyond typical 4-hour systems.

What is the comprehensive efficiency evaluation system of energy storage? The comprehensive efficiency evaluation system of energy storage by evaluating and weighing methods is ...

Eligible projects must have a capacity of at least 2 MW/4 MWh, connected to the distribution and transmission network at all ...
