Where is the world's first intelligent grid-forming power station located?

The world's first intelligent grid-forming photovoltaic and energy storage power station, tailored for ultra-high altitudes, low-temperatures and weak-grid scenarios, has been connected to the grid in Ngari prefecture, Southwest China's Xizang autonomous region.

Why is grid-forming technology important?

"Grid-forming technology has become essential for new energy power stations, crucial for ensuring grid stability and supporting the safe operation of modern power systems," said Zheng Yue, president of Huawei Digital Energy's grid-forming energy storage division.

Is Ngari a strong power grid?

Situated on the edge of the region's power grid, Ngari has a high proportion of new energy installations but a weak grid-- connected to the main grid 500 kilometers away via a single 110-kilovolt line. A 30MW solar power project's output was previously capped at 1.5MW.

Where should Google's Energy Dome facilities be located?

Google will prioritize placing the Energy Dome facilities where they'll have the most impact on decarbonization and grid reliability, and where there's a lot of renewable energy to store, Anda says. The facilities can be placed adjacent to Google's data centers or elsewhere within the same grid. The companies did not disclose the terms of the deal.
