-----  
Why are Australian businesses using commercial solar?

As energy prices continue to climb, more Australian businesses are turning to commercial solar as a smart, cost-saving solution. Designed to meet the higher electricity demands of offices, warehouses, and industrial sites, commercial solar systems generate clean energy on-site, helping reduce power bills and environmental impact.

How much does commercial solar cost in Australia?

As of early 2025, good quality commercial solar power in Australia costs approximately \$1,000 - \$1,300 per kW installed, or as low as \$800 per kW if you install 20-30kW. It's not uncommon for payback on commercial solar systems to be achieved within 5 years. Verify your contract duration with your energy retailer.

How can solar quotes help you install solar panels for your business?

If you're considering installing solar panels for your business, SolarQuotes can help you get quotes from high-quality, pre-vetted Australian installers quickly and easily: I'm a Chartered Electrical Engineer, solar and energy efficiency nut, electric car and e-bike owner, dad, and founder of SolarQuotes.com.au.

Should you invest in a large commercial solar panel array?

Investing in a large commercial solar panel array involves significant capital, and you want to avoid any nasty surprises for your business. To throw in another layer of bureaucracy - many councils require their approval to install systems greater than 10 kW in size.
