On Tuesday, Aug. 5, Earth's solar day will be ever so slightly shorter than usual 24 hours, according to Timeanddate , making it not only one of the shortest days of 2025, but also ...

I'm asking, essentially, if Voyager will legitimately leave the solar system entirely, eventually passing through the outer limits of the Oort Cloud and moving on. Or is it more likely that ...

How does this slow dance through time link to Earth's past, and what could it mean for the future of our planet? Let's dive in and uncover the secrets hidden in Earth's ...

You technically don't need to slow down exactly to 0 m/s relative to the Sun in order to crash into it. Let's calculate the approximate velocity required to graze the "surface" of the ...

Having begun scientific operations this year, it is expected to revolutionize our understanding of both the solar system and the broader ...

The solar panel degradation curve shows an average solar panel degradation per year of about 1%. Most warranties guarantee 90% ...

The Sun, on average, rotates on its axis roughly once per month, but two decades ago, scientists made the baffling discovery that its outer 5 percent spins more slowly than the ...

There are many factors that can affect the Earth's spin, including earthquakes. The 2011 quake in Japan - the one that triggered the Fukushima nuclear accident - sped up ...

Any planet, in our own solar system or beyond, is shaped by a certain set of influences: the whirlwind circumstances of its formation, the contents of its deep interiors, other ...

The slowdown is almost imperceptible, but by using helioseismology -- the study of how sound and gravity waves move through the sun -- the astronomers discovered this ...

The sun is hoist with its own petard. Its outermost layer frustrates photons of light trying to escape. Now it seems that when light ...

The Sun, on average, rotates on its axis roughly once per month, but two decades ago, scientists made the baffling discovery that ...

Sir Isaac Newton's gravitational theory is often viewed as belonging to the philosophical view of the cosmos of the solar system as being mechanical ...

The good news is the Sun will calm down again. Despite the current unexpectedly high solar activity, it will likely slow down by 2026, and is expected to return to a solar ...

The solar sail would be deployed both to slow down the ship and to collect sunlight to generate electricity to power the railgun. The ...
