Are battery energy storage solutions a good choice for a data center?

Gas-based power-generating resources, such as gas turbines, are well positioned to meet current needs and have seen renewed demand amid the data center boom. Battery energy storage solutions also offer scalable near-term capacity but depend on evolving market rules and requirements.

Are lithium-ion batteries a viable solution for data center backup?

Enter modern battery storage solutions. With the dramatic improvements in lithium-ion battery technology, large-scale battery systems have become viable for data center backup and energy optimization. Lithium-ion batteries offer fast response, high energy density, and dropping costs.

Why do data centers use utility-scale batteries behind the meter?

Diagram illustrating utility-scale batteries deployed behind the meter to give data centers unprecedented control over their energy strategy. Data centers' servers, routers, storage systems, and cooling infrastructure require the utmost power stability.

Should a data center use a battery system?

In return for this large cost the system has a very long battery run time and has the ability to accept a very large increase in load. The average data center is entitled to a 75% savings in battery life cycle costs. If the battery system could simply be matched to the initial load and then expanded as needed, this cost could be avoided.
