What are energy storage systems?

Energy storage systems are a technology that is capable of absorbing energy, storing it for a period of time, and later dispatching the energy using mechanical, chemical, or thermal processes. If you have questions about energy storage interconnections or applicable rates, please contact us by email (link to: [energystorage@avangrid.com](mailto:energystorage@avangrid.com)).

What is distributed generation?

Distributed generation is generally a small electrical production facility that provides electricity to a home or business, with excess electricity sold to a utility. These production facilities can generate electricity from a variety of energy sources, including wind, farm waste, water or sunlight.

When does the avoided cost of energy start & end?

The initial start date used to calculate the avoided cost of energy is the interconnection date. Subsequent cash out periods start effective one day after the end of the last cash out bill period. In both cases, the end date used to calculate the avoided cost of energy is the bill period end date of the cash out bill.

What if I Have Questions about energy storage interconnections?

If you have questions about energy storage interconnections or applicable rates, please contact us by email (link to: [energystorage@avangrid.com](mailto:energystorage@avangrid.com)). Our 2025 Distributed System Implementation Plan presents our strategy to integrate distributed energy resources into the New York grid.
