---

After several record-breaking years, the U.S. clean energy sector faces a critical moment. Solar deployment and electric vehicle (EV) sales broke records in 2023 and 2024. ...

Vehicle-mounted solar and wind power energy systems are rapidly gaining recognition as a way to deliver renewable energy while lowering carbon footprints, environmental impacts, and ...

The batteries are charged primarily by plugging in to off-board sources of electricity, produced from natural gas, nuclear energy, coal, wind energy, hydropower, and solar energy. All-electric ...

The share of Chinese exports of wind turbines, solar panels and electric vehicles that go to low- or middle-income countries, as ...

This study suggests and analyzes a stand-alone solar and wind energy-driven integrated system with electro/chemical energy storage to provide independent and ...

"Just get out of the way and stop blocking solar and wind permits," said Shannon Baker-Branstetter, senior director of domestic climate and energy policy at the Center for ...

This study addresses integration of wind, solar, tidal, and electric vehicles, using a unique moth-flame optimization technique, to ...

Solar, wind and batteries will take over. The research institute RethinkX has published a report calling such a future system "Stellar" ...

The Energy Wallet Direct household expenditures on energy--including electricity, gas and other heating fuels, amortized residential solar systems, and retail purchases of gasoline and public ...

Clean generation--nuclear, hydropower, wind, solar, and more--is currently responsible for approximately 40% of the nation's electricity supply and forms the foundation on which clean ...

First, the Oak Ridge Siting Analysis for power Generation Expansion tool (OR-SAGE) is used to assess the suitability of land for potential wind and solar energy ...

Solar, wind and batteries will take over. The research institute RethinkX has published a report calling such a future system "Stellar Energy", claiming that we will enter a ...

We assess the state of supply chains for solar, wind, batteries, and electric vehicles. Since the US enacted the Inflation Reduction Act (IRA), manufacturing has emerged ...

The Energy Wallet Direct household expenditures on energy--including electricity, gas and other heating fuels, amortized residential solar ...

Learn about clean energy sources and why they're important for our planet. Find out more in this informative blog.

The State of US Clean Energy Supply Chains in 2025 Since the IRA's enactment, manufacturing has emerged as the fastest-growing segment of investment in clean energy technologies. We ...

By the authority vested in me as President by the Constitution and the laws of the United States of America, it is hereby ordered: Section 1.

We aimed to establish EV charging stations powered by renewable sources like solar and wind energy using grid to vehicle (V2G) mechanism.
